

• for the prevention of bird collisions •

Feather Friendly® Registered Trade Mark of the Convenience Group Inc.

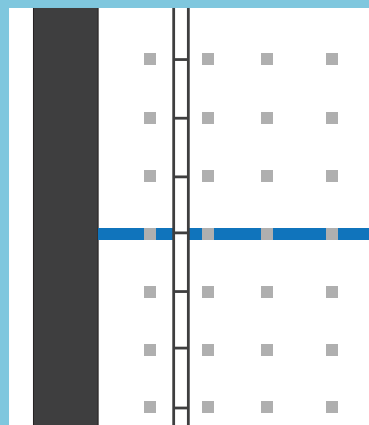

STEP 1

For maximum effectiveness, apply to the exterior side of glass. Clean outside surface of window using a solution consisting of **50/50** water and acetone or rubbing alcohol, dry completely before starting to installing.

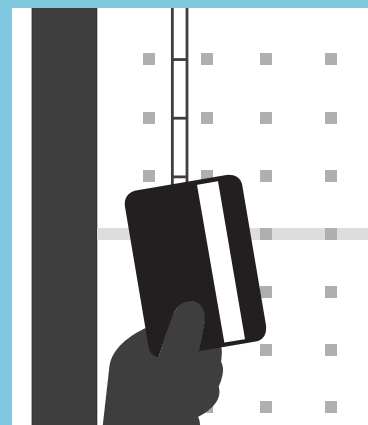

STEP 2

Run the measuring strip provided along one side of the window. Fix in place using a piece of ordinary tape (or equivalent) at the top and bottom of the measuring strip. Position the first line of the strip exactly **2"** below window frame. Repeat the other side of the window.

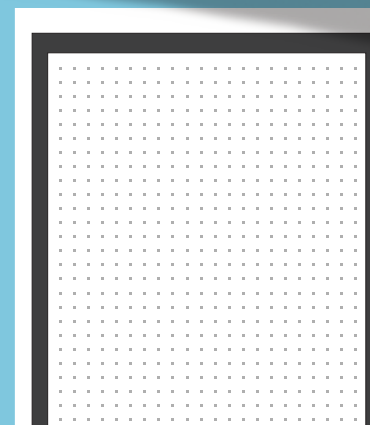

STEP 3

Unroll and cut a length of marker tape slightly larger than the width of the window. Align centre of markers to the exterior side of glass with the first line on both measuring strips, then pull taught and stick in position at both ends. Run your thumb along the tape lightly.

STEP 4

Run a credit card or equivalent across pre-space tape a few times to release air and activate pressure sensitive adhesive. Slowly peel pre-space tape back keeping it flat against glass while leaving markers in place. If markers peel off run card across again.

STEP 5

Repeat step 3 and 4 for every row of the measuring strip until Feather Friendly® is complete. Stop **2"** above window frame.
